## EDUCATION

---

### University of Massachusetts Amherst

*MS in Computer Science; GPA: 3.6/4.0*

*Aug 2018 – May 2020*

*Courses: Computer Vision, Machine Learning, Robotics, Artificial Intelligence, Reinforcement Learning, Neural Networks*

### The University of Texas at Austin

*BS in Electrical and Computer Engineering (Honors; Minor in French); GPA: 3.8/4.0*

*Aug 2011 – May 2015*

## PROJECTS

---

### Pokemon Classifier

- Trained a 7 layer Convolutional Neural Network (CNN) in Python using Keras and Tensorflow on a dataset of about 1400 pokemon images. Obtained accuracy of about 93% over 6 classes.
- The dataset was collected using the Microsoft Azure Bing Image Search API.

### Mini Self Driving Car

- Wrote Dijkstra's shortest path algorithm in Python to solve path planning.
- Implemented vision-based lane detection and vision-based PD controller in Python.
- Project done on Arduino Uno and Raspberry Pi, in a team of 5 people.

### Non-Data-Driven Method of Learning Facets in Object Tracking

- Employed SIFT matching and mean-shift tracking on color histogram to track an object.
- Facets are stored during tracking to augment the reference image database.
- Allows tracking of an object after the object has been reintroduced into the scene while showing a different facet.

### Blink Detection

- Used dlib's face detector and facial landmark models to localise the face and the eyes.
- Computed the eye aspect ratio to determine whether a blink has occurred.

### Grid Pathfinding with A\* and Jump Point Search

- Implemented A\* with Jump Point Search in C++ to solve a grid pathfinding problem.

### High Confidence Policy Improvement (Reinforcement Learning)

- Using importance sampling, produced stochastic policies written in C++ that outperformed the behavior policy for an adaptive insulin advisor.

### Voice Control of Magic Glass with Alexa

- Using Arduino code, interfaced an ESP8266 microcontroller (MCU) to communicate with Amazon Echo.
- The MCU controls a relay that switches the magic glass.

## SKILLS

---

**Programming Languages:** Python, C, C++, MATLAB, Java

**Frameworks/Tools:** OpenCV, PyTorch, Keras, Linux, git, ROS

**Languages:** Chinese (Fluent), Malay (Intermediate), French (Intermediate)

## EXPERIENCE

---

### Powerware Systems

Selangor, Malaysia

*Data Center Engineer*

*Aug 2017 - Jun 2018*

- Designed and built Data Center Monitoring Systems for temperature and humidity monitoring.
- Created shop drawings of electrical panels in AutoCAD, planned cable routing, and built electrical panels.
- Tools used: Modbus TCP/IP, BACNET, WAGO controllers, AutoCAD, MOXA controllers.

### ECE Department, The University of Texas at Austin

Austin, TX

*Graduate Research Assistant*

*Aug 2015 - Dec 2016*

- Researched full-duplex radio. Ported MATLAB to C. Worked with USRP Ettus E110.
- Focused on Interference Alignment via index coding and rank minimisation.

## CERTIFICATIONS

---

- Business Foundations Series for Scientists and Engineers (8 weeks, Summer 2019).
